Surgery courses from IFMEC are designed so the student acquire skills that can professionalize immediately.

Our goal is that the experience not only have an impact in the curriculum but also in daily clinical practice.

We present the V Workshop dedicated to voice pathology and phonosurgery, organized by the Voice Unit of Hospital Sanitas La Zarzuela Otorhinolaryngology Unit, which has all the instruments and human equipment (phonosurgeons and logopedics) necessary for the multidisciplinary approach of patient with dysphonia.

The practical approach of our course focuses on making decisions based on the stroboscopy as well as previous elements necessary for the practice of such examinations and surgeries. We neglect the basics of phonosurgery techniques used for benign vocal lesions (intracordal cysts, Reinke’s edema, sulcus vocalis, vergeture ...), with particular emphasis on the latest techniques and the future of this evolving discipline.

On this occasion we will have a great panel of experts, headed by Prof. Clark Rosen of the University of Pittsburgh.

Venue
Hotel Aravaca Village
Hospital La Zarzuela
Madrid, SPAIN

March 31 and April 1, 2016

V PHONOSURGERY COURSE

International guest:
